BIODIGITALCONVERGENCE=TRANSHUMANISM= CONTROL

GRID

Biodigital convergence is the converging of digital technologies with biological systems, driven by advancements in fields like engineering, nanotechnology, biotechnology, and information technology.

The biodigital convergence is a change of our global society that is being implemented on citizens by our own governments through advanced technology. It affects our health, our food and water, our living environment, our money and our freedoms.

Mega-rich companies in the industry control politicians and enforce the biodigital convergence onto the public in a way that bypasses all local laws or constitutions. It is the beast system, and the Bible says “who can stand against the beast”.

We support the Sustainable Development Goals

Technology Report

Bio-digital convergence standardization opportunities

BIODIGITALCONVERGENCE=TRANSHUMANISM= CONTROL

Source of this information:

We get this information and much of the terminology used in our presentations from the Emerging Technology industry which encompasses: governments, universities, scientists, medical professionals and engineers around the world.

Who is in charge of the Biodigital convergence?

-The International Organization for Standardization (ISO) and the International Electrotechnical Commission (IEC), develops, maintain, and promote standards for this field.

-Policy Horizons Canada, spearheads Canada's strategic foresight work and policy dialogue on the topic.

- The Israel Innovation Authority, is the public agency spearheading efforts to establish Israel as a global hub for biodigital convergence.

Emerging Tech is a multitrillion dollar industry with limitless amounts of money and power to push forward the biodigital convergence. Which again is why we call it the Beast system.

PRODUCTS TO HELP PROTECT

The bio digital convergence is rapidly coming upon us at warp speed. It is the creation of cyber physical systems that will be controlled by an agentic AI God. It is the beast system. It's a convergence of multiple technologies that all use frequencies such as EMF, light, sound and also pressure all developed by the emerging technology industry. These technologies can affect our health and are also used to track and trace biological systems such as plants animals and your human body.

In most of the documentation coming from the emerging tech industry they list the weaknesses of their technology, the two most common being energy and connectivity. If their frequencies can't strongly connect to your body, their tech doesn't work as well.

Orgone energy is a natural technology that does not block the frequencies, but rather filters and scatters them away from your body and your environment... so that they can't get a strong connection. It also acts as a passive negative ionizer that treats your bodies natural energetic biofield, has a grounding effect that changes your cells zeta potential which strengthens our immune system and helps your cells to detox.

For the best way to protect yourself from these emerging technologies we suggest using orgone energy products in addition to a holistic approach such as diet and exercise changes, heavy metal detox, and making different

FROM WEF: THE PLAN FOR A DIGITAL CONTROL GRID RUN BY AGENTIC

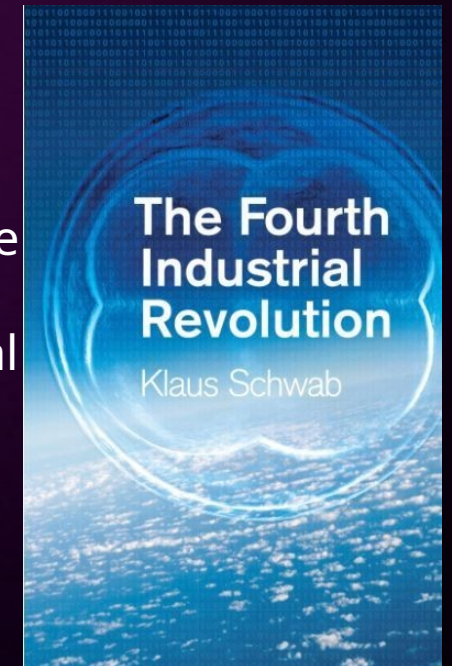

Agentic AI refers to AI systems composed of agents that can operate autonomously to achieve specific goals. These systems go beyond traditional AI by making decisions, planning, and executing tasks with minimal human intervention. Unlike reactive AI, agentic AI is proactive and can adapt to changing circumstances to optimize outcomes.

In October of 2024 The WEF opened the Global Government Technology Centre in Berlin with the mission to “accelerate the digital transformation of government” partnering with global leaders in Agentic AI powered intelligent operations.

This initiative is part of WEFs Fourth Industrial Revolution (emerging technologies). The Goal from the G20 is to develop Digital Public Infrastructure to accelerate “sustainable development Goals”. (“sustainable” = DEPOPULATION in WEF Speak)

Emerging Technologies are what drive the Fourth Industrial Revolution

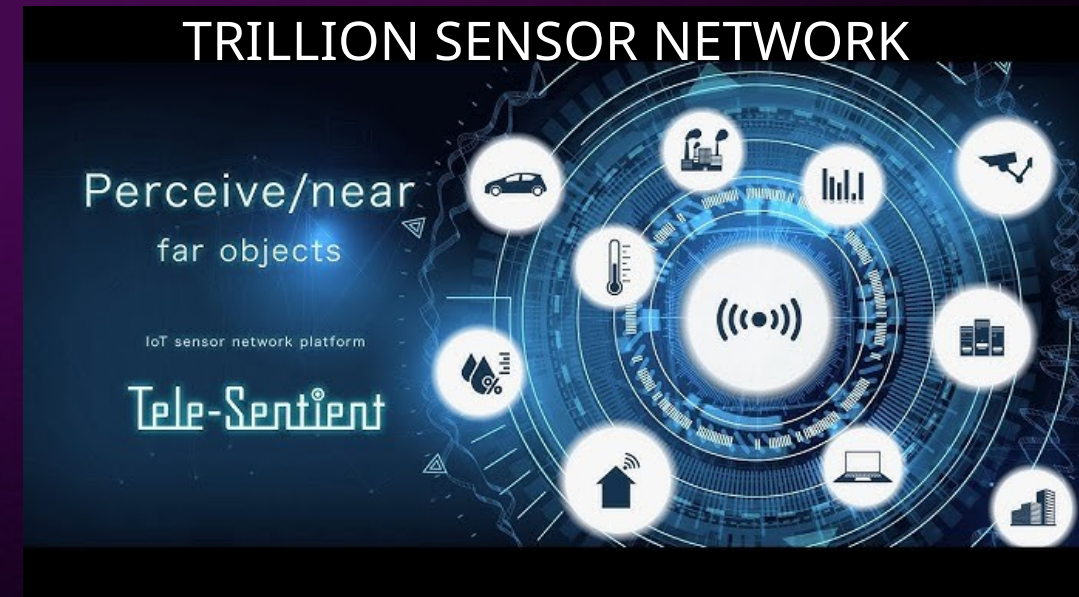

FROM WEF: THE PLAN FOR A DIGITAL CONTROL GRID RUN BY AGENTICS

One of the main proposals in this document is called “simulation infrastructure” which are agentic AI models that can simulate crisis scenarios. A part of this is “simulation infrastructure” with the claimed ability to predict the future. Everything we do will be analyzed and simulated with the help of “virtual twins”. A DIGITAL TWIN is created for every individual. Everything we do will be analyzed and simulated with the idea that these simulations can be used for knowing the future actions of an individual or group.

According to the International Organization for Standardization, “an AI agent can be broadly defined as an entity that senses percepts (sound, text, image, pressure etc.) USING SENSORS and responds (using effectors) to its environment.”

(more on this
in other slides)

WHY AI IS LYING TO YOU

GARBAGE DATA IN, GARBAGE DATA OUT

How Does AI Work?

AI systems learn from data to identify patterns, make predictions, and perform tasks that typically require human intelligence, such as reasoning, problem-solving, and language understanding

AI learns from data The more data an AI system is trained on, the better it becomes at identifying patterns and making accurate predictions. Algorithms are trained on data to identify patterns and make predictions. AI systems require significant computational power to process the vast amounts of data needed for training and execution.

machine learning allows systems to learn from data without explicit programming

deep learning utilizes artificial neural networks with multiple layers to process information, mimicking the structure of the human brain

Garbage in garbage out means that the quality of the output is directly dependent on the quality of the input. If the input data is flawed, inaccurate, or irrelevant, the resulting output will also be flawed, inaccurate, or irrelevant.

Note: This is listed as a weakness on the emerging industries own documentation www.fivethirtyeight.com

WHY AI IS LYING TO YOU

REAL WORLD EXAMPLE

Person runs a legitimate business selling a legitimate product

Nefarious entities target this person, their business and product.

-Write a large volume of hit piece articles lying about them.

-Deploy hundred or thousands of sock puppet accounts for comment sections and social media platforms, further spreading the lies, and astroturfing.

-Make hundreds or thousands of videos that are pushed out there by platform videos to appear to "go viral".

-Employ real people, usually the dregs of society, to make videos and further spread the lies.

AI Runs a search to collect data on individual, their business and product.

The volume of data found by the is:

10% accurate data that comes from the person, their business and their product. And perhaps any scientific studies that support it.

90% lies and propaganda coming from cognitive warfare strategies

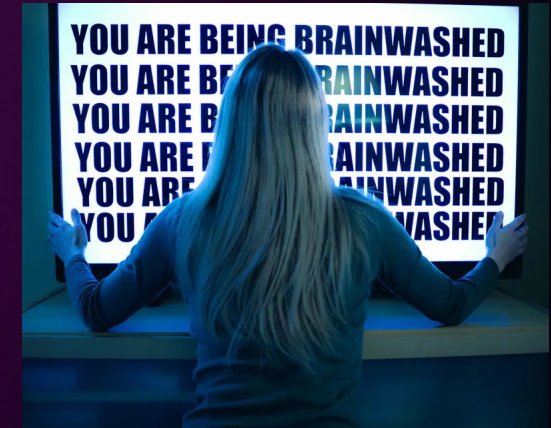

AI DOES NOT RECOGNIZE COGNITIVE WARFARE STRATEGIES AND CONSIDERS ALL THE LIES TOLD AS TRUTH.

AI then makes a decision and gives an output weighing and measuring the garbage data in and gives you garbage

Human observer looks to AI for information, does not do their own research, does not use logical reasoning, does not have the Holy spirit of God leading them into all truth, and believes all the lies.

Cognitive Warfare wins, Humanity loses.

FEEDING THE AI D.O.G.E. AND THE DATA COUP

DOGE Department of Government Efficiency created in 2025

Previously it was the US Digital Service group created by Obama over 10 years ago.

DOGE has acquired vast amounts of sensitive personal and financial data from numerous government agencies, including the Treasury Department, Office of Personnel Management (OPM), Social Security Administration (SSA), Department of Health and Human Services (HHS), IRS, and National Labor Relations Board (NLRB). The acquired data includes Social Security numbers, tax returns, home addresses, background checks, health information, banking details, and migrant children's records. The purpose of these data acquisitions is to feed it into AI training to establish a control grid run by Agentic AI.

FEEDING THE AI GROK, CHAT GPT, SOCIAL MEDIA

Every time we interact with social media platforms like:

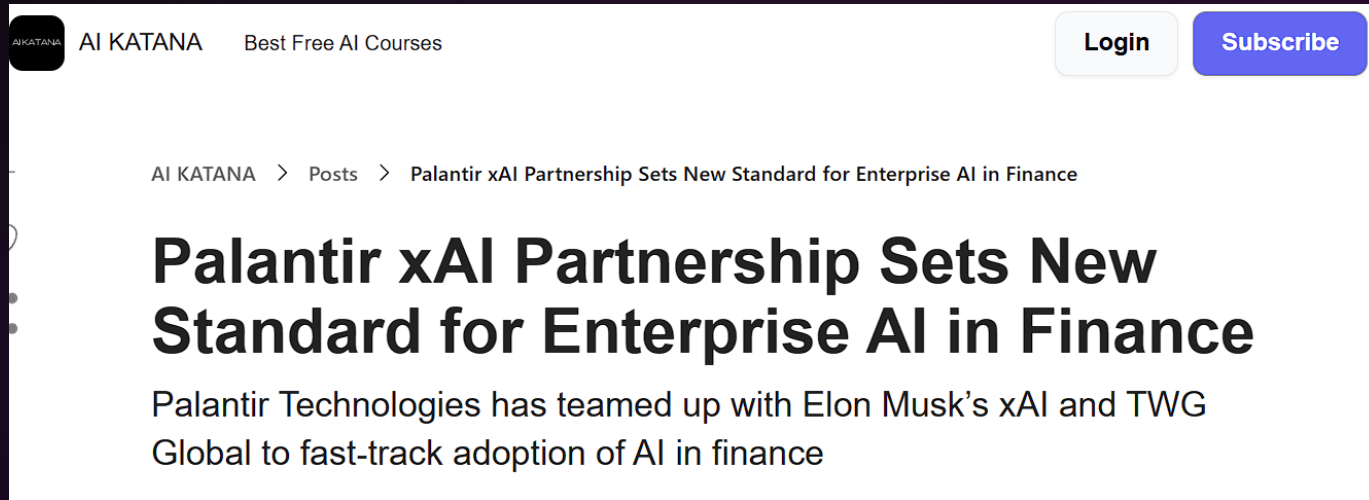

Grok, Chat GPT, Facebook, YouTube, Google, phone messaging etc. We are feeding the AI our data. That data about us is then sold to third parties which can be used in court of law to convict us of crimes that we did not commit

In this TED Talk, Public Defender describes how your data is sold to third parties like law enforcement agencies that can then be used to convict you of crimes you did not commit.

<https://www.youtube.com/watch?v=1MoYHJaKsZE>

xAI and PALANTIR PARTNERSHIP

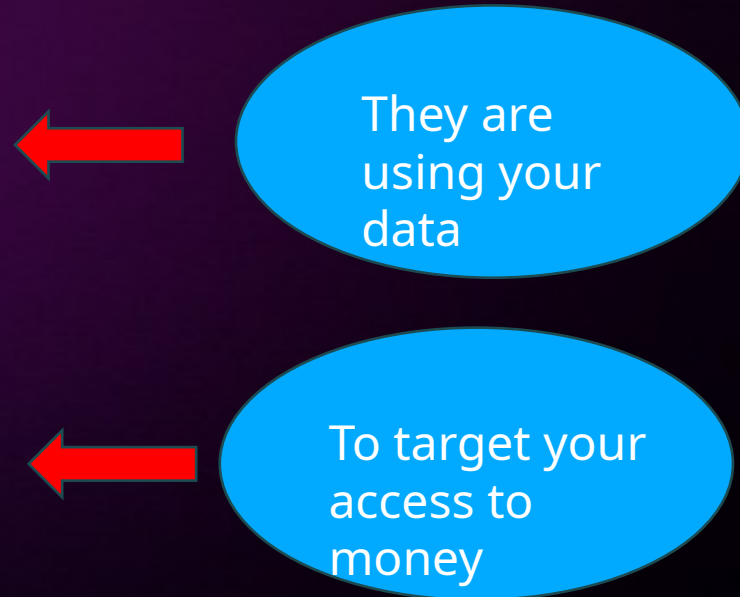

Grok + AIP under one roof

xAI's Grok large-language models and Colossus super-computer will be embedded in Palantir's Foundry & AIP platforms, creating an end-to-end stack for reasoning, orchestration and secure data governance.

Financial-services focus

The initial target market is banking, insurance and capital-markets operations—sectors where Palantir already hosts regulatory-grade data foundations and where TWG has deep equity stakes.

Palantir provides the U.S. military with artificial intelligence (AI) systems used to power military surveillance and weapons systems.

Palantir provided the AI systems for Lavender AI which was used by Israel to slaughter massive numbers of innocent Palestinian men, women, and children.

Palantir AI systems is currently being used on American citizens in 49 states and 5,000 communities via Flock Safety Contracts and more.

Palantir was awarded a \$30 million contract to compile data on Americans in April 2025 via ICE to track migrant movements in near real-time, identify individuals for removal, and streamline deportation logistics.

LAVENDER AI

TESTING AN AI AUTONOMOUS WEAPON SYSTEM ON INNOCENT CIVILIANS

An AI based Autonomous weapons program called “Lavender” was used by the Israeli Army to slaughter massive numbers of innocent Palestinian men, women, and children.

The Army gave sweeping approval to adopt Lavender’s kill lists, with no requirement to thoroughly check why the machine made those choices or to examine the raw intelligence data on which they were based. This was despite knowing that the system makes what are regarded as “errors” in approximately 10 percent of cases, and is known to occasionally mark individuals who have merely a loose connection to militant groups, or no connection at all.

Individuals were attacked while they were in their homes — usually at night while their whole families were present .

Additional automated systems, including one called “Where’s Daddy?” were used specifically to track the targeted individuals and carry out bombings when they had entered their family’s residences. Another called “The Gospel” targeted buildings and structures.

PALANTIR SURVEILLANCE IN AMERICA: FLOCK SAFETY CONTRACTS

Flock Safety is a private company. Its lead investors include the Founders Fund which is Peter Thiel who is also the lead investor in Palantir. In August of 2025 the DOD awarded a contract for \$10 billion to Palantir.

Flock Safety provides a public safety system using hardware (like license plate readers) and software to help communities and law enforcement reduce crime and solve cases by capturing objective evidence of vehicle movements. Their cameras provide real-time alerts and actionable data, such as vehicle license plates, which are used to identify suspects, find stolen cars, and track vehicles involved in crimes. The system serves neighborhoods, businesses, schools, and cities to improve public safety and deter criminal activity.

The platform uses machine learning to process the captured data, detecting vehicles of interest for law enforcement. Law enforcement receives immediate alerts when vehicles associated with crimes, like stolen cars or AMBER/Silver Alerts, are detected in an area.

Flock safety has significant contracts with municipalities all over the country, in 49 states and 5,000 communities. Check if your community has a contract with Flock safety.

Flock technology was used to search 83,000 cameras to prosecute a woman traveling over state lines to obtain an abortion in a state where it was illegal.

Flock technology is used in ICE investigations and deportations.

NEW DIGITAL HEALTH ECOSYSTEM

This paper written in 2018 accurately describes the intention of the NEW Digital Health Ecosystem announced this year. The paper describes using accurate industry terminology the plans of what we are to expect.

The paper refers to “Industry 4.0” which is the Fourth Industrial Revolution described by Klaus Shwab and the WEF. It calls this new digital health care system and its emerging technologies “Healthcare 4.0” and a “cyber ecosystem” where the Internet of things can control medical and residential components with transformational machines.

It speaks about remote health care via remotely controlling medical devices. It talks about using AI to prevent, diagnose or treat patients, for drug development, personalized medicine, and patient monitoring and care.

It states: “digital infrastructure is the prerequisite for benefitting from the opportunities created by Industry 4.0.” (your newly built data centers) and that “Providers of service and goods need to work hand-in-hand with consumers to ensure their adaptability to smart product characteristics”

Connected Wearable Devices

FTWPROJECT.COM

NEW DIGITAL HEALTH

At the top of this diagram, you see the real human in their real environment connected to all of their devices via wearables and home smart devices. All of these devices are connected to the Body Area Network, which is connected to the Local area network in your home, which is then connected to the wide area network which is your public authorities, hospitals, pharma industry and insurance industry. (and probably your bank in the near future)

At the bottom of the diagram, you see a digital twin which is a digital copy of you stored on a server. AI is being used to run simulations on your digital twin. They call this "cyber healthcare systems".

In the center you see that your digital twin is connected to your physical body, home, hospital, public authorities, insurance company, and big pharma. The connection is done through communication networks such as Wide Area Network (WAN) Personal Area Network (PAN) and Body Area Network (BAN).

The sensors in your body and in your environment feed data to the digital twin which then analyses the data and ACTUATES whatever they want it to back to you.

HOW THEY DO IT: NEW DIGITAL HEALTH

ECOSYSTEM

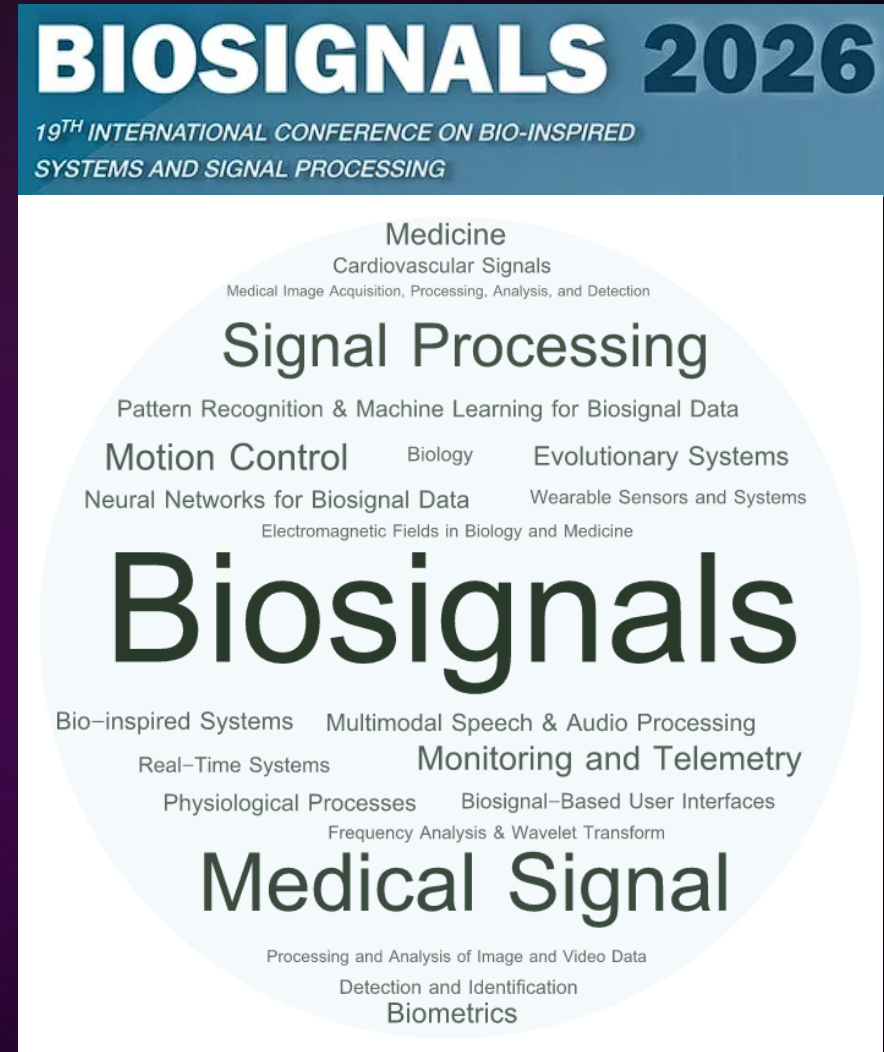

Bioinformatics and computational biology are interdisciplinary fields that use tools and methods to analyze biological datasets. The biological datasets come from the HHS.

Physiological signal-based security uses the vital signals of the human body that is collected during health monitoring operations to provide usable security to Body Area Networks. Body Area Networks are cyber-physical systems which interact with the human body by using sensors to collect, process and communicate health data (vital signals, temperature, pressure) from the person.

Physionet.org which was established in 1999 by the NIH is a database that collects and shares recorded and biomedical signals. (Shares your biomedical signals with whom?)

Molecular communication (IEEE) is how they harvest the physiological data sets from your body. Physiological signals are biosignals, which emit from your body naturally, and are continually measured and monitored originating from living organisms.

The medical industrial complex has been holding conferences internationally for the past 19 years (biosignals 2026 Spain) to provide biomedical data sets.

Internet of Things and Digital Twin applications in the health sector

Presentation summary

The Internet of Things (IoT) is an enabler of 'smarter' environments in multiple sectors. Together with Digital Twin (DTw) technologies, it is demonstrating an evolving potential to not only optimise existing services but also create new one.
The purpose of this presentation is to provide an introductory overview of the applications of these concepts and technologies in the health sector.

WORLD STANDARDS DAY BEAST SYSTEM PLAN: GRAPHENE BASED SENSORS

From *Is “Implantables” a subset of “Wearables”?* China Contribution, Dr. Weijun Hong, WSN, Beijing, China

(SC41 N064, 2017-05)

Parameters	Wearables (Phases 1 & 2)	Implantables (Phase 4)
Information type	Position, movement, temperate, heart beat rate, pulse...	Biological data: Humoral component, blood sugar...
Shape	Watch type, bracelet type, clothes...	Super small, super thin, flexibility, conformal to human body
Power Supply	Battery-assisted	Battery-less (frequently)
Power recharge	Wired recharge	Energy harvesting
Communication type	Wi-Fi, BLE, Zigbee, NFC, 3G, 4G...	Backscattering Communication
Data Rate	X Mbps	Tens of Kbps
Networking	Various type	Only peer-to-peer
Work type	Continuously working	Activated by triggering signals
Privacy	Medium	High
Security	Medium	Very High

HUMAN DIGITAL

TWINS

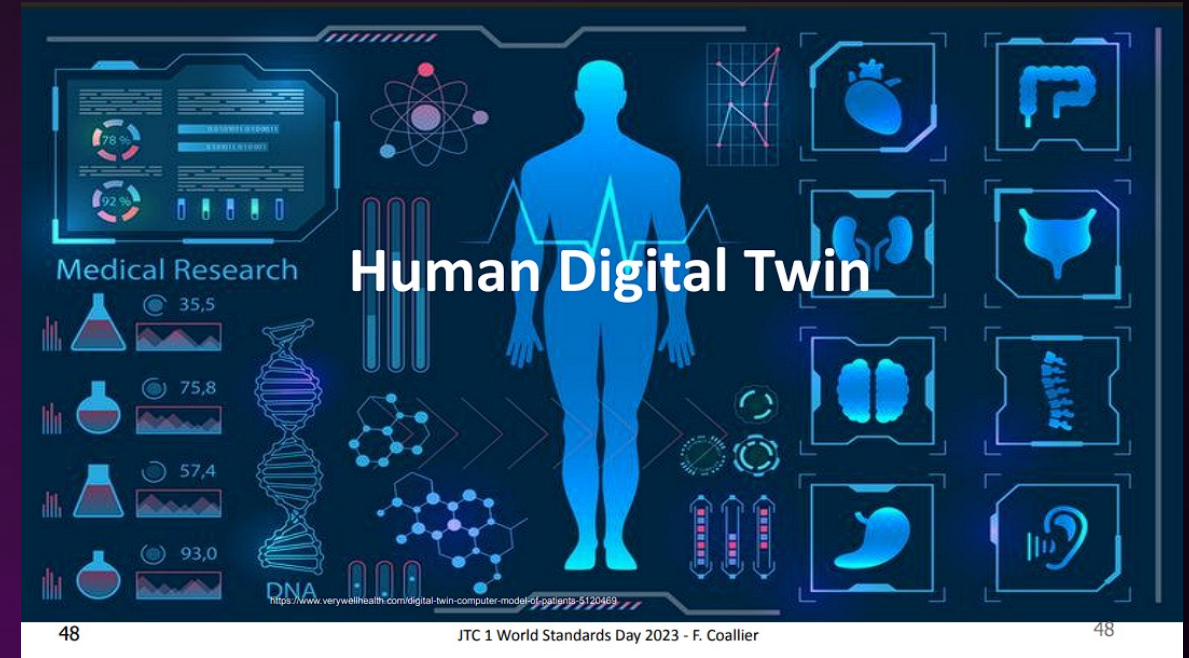

A digital twin as a digital representation of a real-world entity or system. It is an evolving digital profile of the historical and current behavior of a physical object or process. In this case it is a digital copy of you: your anatomy, your health records, your genetics, and all your data. (think about all that data DOGE just got access to)

Your digital twin is based on massive, cumulative, real-time real-world data measurements across an array of dimensions.

Your digital twin is made through mirroring which is done through synchronization using data streams that are generated by sensors.

Human digital twin "actuators" refer to the components or systems that execute actions or provide feedback in the digital or physical world based on the data and simulations within the human digital twin system such as controlling

POST

U.S. Data Centers Could Quadruple Power Demand by 2030

Today, data centers account for roughly 4% of total U.S. electricity consumption. But by 2030, that share is projected to rise to 12%, driven by unprecedented growth in computing power, storage needs, and AI model training.

<https://elements.visualcapitalist.com/charted-the-energy-demand>

DATACENTERS ELECTRIC BILLS AND WATER

Over 5,000 New Datacenters are being built all over America.

They are not just being built with big Tech's money, they are being built with your tax dollars. States have given tax breaks to tech companies of at least 1 Billion dollars. It's the tax payers that will make up that difference.

With promises of creating thousands of jobs, in actuality the numbers are much lower, and many of the jobs are remote, which means they are not even local jobs.

Citizens all over America are getting hit with high electric bills due to the data center.

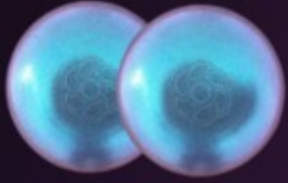

Data centers need an enormous amount of clean water to keep the servers cool. These data centers are being built in deserts where water is already scarce. Local residents are being asked to ration water and some don't have any water at all. Some have data center sludge coming out of their faucets.
